BARBARICUM CHOSEN AS SUBCONTRACTOR ON \$36 MILLION CONTRACT TO PROVIDE ENERGY PROGRAM SUPPORT TO THE U.S. MARINE CORPS

Barbaricum to support efforts to meet USMC energy reliability and resilience requirements

Washington, D.C., September 28, 2018 – The U.S. Marine Corps Installations Command (MCICOM) has awarded Concurrent Technologies Corporation (CTC) a prime contract to support the Marine Corps' efforts within its various sections (i.e. Headquarters Marine Corps, Regions, and Installations), which possess unique challenges in addressing the Marine Corps' objectives to meet Energy Reliability and Resilience requirements. Through its role as prime contractor, CTC will address utility distribution systems that support the energy reliability and resilience requirements linked to mission readiness and operational effectiveness.

Barbaricum is one of four small business subcontractors chosen as a team member on this effort based on their unique, best-in-class technical capabilities. Our strategic communication and mobility subject matter experts will support the overall effort in coordination with CTC, Sain Engineering Associates, Risk Mitigation Consulting, and Cintel.

“Our team is uniquely qualified to provide high-quality services and innovative solutions, leading to increased mission effectiveness, energy resilience, and reduced waste to the Marine Corps,” said Edward J. Sheehan, Jr., CTC President and CEO. CTC serves as the U.S. Marine Corps Installations Command's prime technical support contractor in addressing all of its energy efficiency, resiliency, and reliability needs for all Marine Corps installations worldwide.

“We are excited to be included in the CTC team and look forward to supporting this important mission for the U.S. Marine Corps Installations Command,” said Brandon Bloodworth, Barbaricum Co-Founder and Partner. “Barbaricum has supported energy, technology, and communication services since its' inception, and we look forward to continuing this exciting work on behalf of MCICOM.”

The contract was awarded in a full and open competition and includes one base period and four option periods that could reach up to \$36 million in value if all the option years are exercised.

“Energy touches every aspect of Marine Corps missions and functions, and even short-term interruptions in electric power or disruptions to delivery of fuel or natural gas can have serious consequences on mission readiness and the ability to deploy Marines in support of critical operations,” said Randy Monohan, MCICOM's Energy Projects Officer.
